FIND THE INDUSTRIAL ADHESIVE THAT MEETS YOUR EXPECTATIONS

Adhesives are very common in industrial applications. Numerous types of adhesives are available on the market, all with their own unique properties. But almost every application is unique, and yours is no different. You are not looking for any industrial adhesive, but for the perfect industrial adhesive for your unique application. If an adhesive fails to meet your industrial requirements, it will have technical and, by extension, economic consequences. Not only that, it can negatively impact your company's image.

You won't settle for an industrial adhesive that comes close to your wishes and might do the trick. You need the one that qualifies on all requirements. We at AdhesivePlatform.com understand that. And we are here to help! There are many different industrial adhesives—so many that the options may seem infinite. Yet no single industrial adhesive seems to have all the properties necessary for your project. So, how exactly do you find the specific industrial adhesive you need?

The first step is to identify the specifications the industrial adhesive needs to meet. With this information we can perform a focused search for the right supplier. AdhesivePlatform.com has an extensive network of industrial adhesive suppliers. Though not one industrial adhesive is the same, with our contacts we will find the industrial adhesive you need or someone who can produce it for you.

Map the specifications for the industrial adhesive

In order to find the right supplier for your industrial adhesive, it is important to know what the requirements are. What properties are necessary for your project? For example:

- The industrial adhesive must be removable
- It must be possible to spray the adhesive
- The adhesive must be heat-resistant
- The adhesive must be environmentally friendly, compostable, or biodegradable
- It must be waterproof
- It must be durable
- It must be super-strong
- It must be food-safe
- It must be fast-drying
- It must be flexible
- It must be coloured
- It must be less costly
- And on...

Something else to consider is the material you want to bond with. Does the industrial adhesive need to bond with:

- metal
- rubber
- fabric
- wood
- plastic
- glass
- vinyl
- concrete
- steel
- leather
- paper
- cardboard
- or textiles?

All different types of materials require a different type or combination of properties in the industrial adhesive. Maybe you already know the type industrial adhesive you need. It could be an epoxy adhesive, or a polyurethane, a methyl, a hot melt, or a polymer. If not, we can advise you on the different types of industrial adhesives and help you find the type your project needs.

MAP THE PROCESSING AND USE OF THE INDUSTRIAL ADHESIVE

We have just mentioned some of the properties of industrial adhesives that you may be looking for. But it is also important to consider the use and the application process of the project in order to find the industrial adhesive that fits your needs.

What properties should the industrial adhesive have? For instance, what is the required viscosity/thixotropy of the industrial adhesive? What are the minimum and maximum temperatures the adhesive must be used in? Should the adhesive be resistant to mechanical use, humidity, UV/sunlight or chemicals? And under which physiological conditions will the product be used?

Furthermore, you need to determine the procedures you will be using. For example the application method, will it be manual application, semi-automatic, or automatic application? Also, what will be the amount of parts per day/week/month or year you will be bonding? This will determine the amount of adhesive you need. What will be the cycle time per part in production? The packaging and dispensing method? And the adhesive curing?

In short, the industrial adhesive must not only fit the end product—it must also fit your production process.

DETERMINE THE SPECIFICATIONS OF THE IDEAL ADHESIVE

There is a lot to consider when looking for specialized industrial adhesives. Could you use some help in determining your adhesive specifications? We would like to help you map these out. This way, you can search more specifically for the right industrial adhesive and adhesive supplier. AdhesivePlatform.com would like to be your sparring partner in your search for the right industrial adhesive!

ADHESIVEPLATFORM.COM HELPS YOU FIND THE INDUSTRIAL ADHESIVE THAT'S BEST SUITED FOR YOUR APPLICATION AND PRODUCTION PROCESS

AdhesivePlatform.com partners with dozens of suppliers of industrial adhesives worldwide, both large and small players who can offer various innovative industrial adhesives. In this way, we help connect our clients with industrial adhesives that are perfectly suited to your own specialized production processes and applications.

Are all the requirements for your adhesive clear? Then AdhesivePlatform.com can help you find the most suitable industrial adhesive:

- You will receive independent advice on which industrial adhesive is best suited to your specific application.
- We specialize in finding specific adhesive solutions for all industries.
- We actively search for the right industrial adhesive and even look off the beaten track.
- We make use of our worldwide network of suppliers of industrial adhesives.
- The best part is that the entire process is free of charge: from advice to introduction to the adhesive manufacturer, we are fair and transparent.

In short, AdhesivePlatform.com is the partner that helps you find the right industrial adhesive for your specific production process and application.

IN JUST A FEW STEPS, YOU WILL FIND THE PERFECT INDUSTRIAL ADHESIVE

- 1) Contact us!
- 2) We discuss your specific situation with you.
